Alberta Manlift Operator Certification

Manlift Operator Certification Alberta - We provide an aerial lift and scissor platform training and certification to empower the trainee with the knowledge and general understanding of the safe and efficient utilization of "Power Operated Mobile Work Platforms," based on the current regulations in the industry. Upon successfully completing the training, those participating would be able to understand and know certain safety and health related dangers connected with making use of scissor and aerial lifts.

There are different affiliated locations in your district offering Manlift Operator Certification Programs. Trainees are provided with in-depth instruction about safe utilization and regulations together with extensive hands-on training. The skill level and knowledge of every trainee is evaluated and individuals who are capable of demonstrating an acceptable level of operational ability will be given employee documentation and Operator Certification cards.

Theory Training
The trainer guides those training through a comprehensive and interactive review throughout the theory training. The operator workbook is studied which covers all applicable regulations. Other subject matters like safe operating measures, different equipment kinds in addition to various associated applications and sizes, pre-use inspections and general work place safety are explored individually.

Theory Evaluation
The Theory Evaluation starts with a written test based upon the concepts covered in the operator's reference guidebook. These graded are graded and returned to the ones training. The tests are then reviewed to guarantee understanding and a minimum score of 70% is considered necessary in order to pass this part of the training.

Practical Training
The practical training is covered in the hands-on part. It is here that the ones training are shown the safe operating measures, like for example the shutdown and parking procedures and the pre-use inspection measures. Each trainee has the chance to operate the machinery and practice the skills they learned during Theory Training under the helpful eye of the program trainer in a setting that is safety controlled.

Practical Evaluation
The evaluation of the practical portion is where the trainee is evaluated as to whether they have the minimum level of skill. Those training are individually tested on their skills utilizing the equipment in a somewhat challenging course setting. Once the assessment is complete, the ones training are de-briefed and given the opportunity to deal with whichever issues they may have about any portion of the program. Every employer of a successful trainee will be given the official records and documents soon after the program has been completed.
