

Alberta Aerial Lift Train the Trainer

Aerial Lift Train the Trainer Alberta - The Aerial Lifts Train the Trainer Certification Program will teach trainers how to effectively train operators in safe industrial mobile equipment operation. Trainers are given in-depth instruction on aerial lift equipment. The program is provided on an open enrollment basis and delivered at selected training sites. Prior to certification, trainers are evaluated and scored based on their understanding and demonstrated skills.

The Aerial Lifts Train the Trainer Certification Program emphasizes practical learning. As the number one training provider in the industry, we provide the best hands-on training possible through chances to practice techniques and concepts learned inside the classroom. In addition to hands-on experience, trainers develop general knowledge of machine theory and instructional techniques, field and classroom communication skills, and ability to efficiently train and evaluate operators. Trainers would gain knowledge about what traits make a successful trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional techniques involved in communicating concepts in a classroom and/or field situation. Knowledge needs a training part to be effective in workplace environments. There are three aspects of equipment operation which the trainer should learn how to convey to operators: what to carry out; how to do it; and the reason why it needs to be carried out.

The program offers detailed, up-to-date reference material in order to help trainers convey the subject matter to machine operators. Instruction manuals include detailed information regarding all aspects of industrial mobile equipment operator training. Incorporated within the package are training aids that provide a visual reference to improve the learning experience. The equipment-specific training products contain important materials meant for both the operator and the trainer: videos/DVD's, overhead transparencies, equipment models, safety message posters; stability pyramids and digital training aids.
